

VIDEO/ DATA WALL DISPLAY (24x7 Operation) Bigger the screen higher the impact

Video walls are also known as Data walls. Video wall is a multi-monitor or cube set up that display the content by connecting with the external sources like USB, PC, Laptop, CCTV, etc. With LED backlit & LCD technology it offers implausible color depth and contrast quality.

We can use all the cubes to show one single content or can show on the part of the data wall as well.

With our narrow bezels and high resolution video walls with auto colour and brightness matching mechanism offers far fetched experience & factor to any viewer.

LED Cubes are available in different size. They are reliable & durable amenity to any organization.

It comes with an optional video wall controller that helps to spilt & distribute one single image into parts.
