

hugoTECHNO

Network Management Software

Specifications:

Model	HGT-NMS
Maintenance Log	Generated automatic emails, and distributed to predefined lists, log a fault/maintenance visit, with warnings to operators, reports create to show faulty items of equipment, time taken to fix
Audit Logs	For investigation purpose all user activities can recorded in audit logs of system
General Requirement	SNMP MIB compiling capability to integrate any 3rd party snmp compliant device, tool to search and locate the physical location of connected devices and end users, quickly and easily, VLAN configuration and monitoring, comprehensive remote management support for all proposed network devices and any SNMP MIB-I or MIB-II 12 manageable devices, LDAP/RADIUS/TACACS authentication for users of the application, centralized history of firmware and configuration changes and other inventory management operations made to a device, track device attributes such as serial number, asset tag, firmware version, ability to present detailed configuration information including date and time of configuration saves, firmware version, and file size, record a history of device attributes, and reports any changes made to the device
Reports	Alarm management for performance and any potential trouble in the network, Alarm Dashboard/quick look on alarm, Generate valuable, in-depth capacity reports of used and unused resources for network inventory planning purposes
Software Architecture	Logging and application maintenance performed centrally, scheduled events tasks, user perform behind the scenes/schedule an event for another time in the future, Web-server architecture, centralized management upgradeable managed wired, wireless & security components 5000, integrate with LLDP, SNMP, L2 and L3 protocol, system-level operations device discovery, event management,
NMS Feature	Software Architecture: Integrate with LLDP, SNMP, L2 and d L3 protocol, provide, centralized management upgradeable to manage wired, as well as wireless & security components (min 5000 no's), System-level operations such as device discovery, event management, logging, and application maintenance to be performed centrally, scheduled events or tasks that the user can perform behind the scenes or schedule an event for another time in the future, System wide deployment of VLAN configuration and monitoring capabilities, Comprehensive remote management support for all proposed network devices as well as any SNMP MIB-I or MIB-II Manageable devices, RADIUS/TACACS or LDAP Authentication for users of the application, SNMP MIB compile capability to integrate any 3rd party SNMP compliant device, Tool to search and locate the physical location of connected devices and end users, quickly and easily, Ability to track device attributes such as serial number, asset tag, firmware version, Ability to present detailed configuration information including date and time of configuration, saves, firmware version, and file size, History of device attributes, and reports any changes made to the device, Provide a centralized history of firmware and configuration changes and other inventory, management operations made to a device., Generate valuable, in-depth capacity
